Topics to choose from:

Health Care:

- How can our current healthcare crisis be solved with a technological solution?
  - Is there any way we can reduce wait times in large healthcare centers?
- What are some ways that we can make the process more efficient?
- Are there procedures for medical diagnosis that can be done with a computer/phone?

Education:

- What is lacking in our current education system that can be solved or improved with technology
- How can access to education be increased through an app or other technological solution?

- Judging Criteria: scale from 1 to 10 for each
  - Originality
    - How original is the idea compared to products in the industry currently? How does it compare to the other submissions?
  - Scalability
    - Can it be deployed and prove to be a successful product? Can people find themselves being reliant on this product?
  - Functionality
    - How well does the app work? (glitches, bugs, etc)
  - Design
    - Does it look professional? Are design components placed strategically to enhance user experience?
    - Is it user friendly? Are the mechanics intuitive?
  - Prompt conformance
    - How well does the product answer the prompt?
